RESULT 15
US-09-489-039A-341
; Sequence 341, Application US/09489039A
; Patent No. 6610836
; Patent No. 6610836
; GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
; TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KITILE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KITILE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
; FILE REFERENCE: 2709.2004001
; CURRENT APPLICATION NUMBER: US/09/489,039A
; CURRENT FILING DATE: 2000-01-27
; PRIOR FALING DATE: 1999-01-29
; NUMBER OF SEQ ID NOS: 14342
; SEQ ID NO 341
; LENGTH: 1266
; TYPE: DNA
; ORGANISM: Klebsiella pneumoniae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BU713770 529 bp mRNA linear EST 23-OCT-2003
SJAABUGG2 Adult SjC 7/94 Schietosoma japonicum cDNA similar to
pdb|1DKP|A Chain A, Crystal Structure Of Phytate Complex Of
Escherichia Coli Phytase At Ph 6.6. Phytate Is Bound With Its
3-Phosphate In The Active Site. Hg2+ Cation Acts As An
Intermolecular Bridge, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Contact: Zeguang Han

/note="Vector: Lambda ZAP-II XR.; Site_1: EcoR I; Site_2:
Xhol I; Several hundred adult Schistosoma japonicum
(Anhui, P.R. China, strain), of mixed mex, were perfused
from the mesenteries of experimentally infected mice and
rabbits at the Queensland Institute of Medical Research,
Brisbane, Australia (QIMR), and stored for several months
in liquid nitrogen. Subsequently, mRNA was isolated at the
QIMR from lysates of these worms by oilgo dT
chromatography, using a kit from pharmcia. The mRNA was
then shipped to Clontech, Palo Alto, CA, USA, who
constructed a cDNA library. First strand synthesis was
primed with an oilgo-dT-XhoI-primer and synthesized using
M-MLV reverse transcriptase. Second strand synthesis was
accomplished with RNAse H and T4 DNA polymerase. The
double stranded cDNA was ligated to EcoRI linkers,
digested with EcoRI and XhoI, and ligated into the
phagemid vector lambda ZAP II XR. After construction of
this directional library by Clontech, it was returned to
the QIMR. During analysis of the library at the QIMR, we
have found that a small percentage, 2% to 3%, of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            86-21-50801922

```

clones contain inserts that appear to be highly homologous to sequences from salmonoid fishes, as determined by homology comparisons using BLAST and by Southern hybridization analysis to genomic DNA from salmon (Sigma Chemical Co., St. Louis, NO) under stringent washing conditions. The remainder of the clones appear to contain S. japonicum sequences."

CDNA was prepared from polyA+ mRNA using ZAP - CDNA Synthesis Kit (Stratagene). The double-strand cDNAs were fractionated in a sepharose CL-2B 40cm-columns and fragments sizing between 0.8 and 1.5 Kb were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Location/Qualifiers

Description: Aphids inoculated on one-week old Vicia faba
under non-sterile conditions. All parthenogenetic stages
and both winged and wingless adults were collected for
library construction.; experimental condition: long
photoperiod (16-hr light/8-hr dark at 18 c)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12
